Flight Fare Prediction

1. Abstract

The recent international things had a large impact on the aviation sector because of several reasons. This documentation is all about the user interface wireframe, here the home page of our flight fare prediction project is explained.

Flight Fare Prediction

2. Web Interface

Our web page is one single interface where both input from the user and the prediction is displayed.

The screenshot shows a web interface for flight fare prediction. It features a purple background and a title bar at the top that reads "Flight fare prediction" followed by a smiley face emoji. Below the title bar, there are several input fields and dropdown menus for user input. The inputs are: "select your airline services" (a dropdown menu showing "IndiGo"), "Day of journey" (a text input field), "month of journey" (a text input field), "select your Source" (a dropdown menu showing "Banglore"), "select your Destination" (a dropdown menu showing "New Delhi"), "arrival time in hour" (a text input field), "arrival time in minute" (a text input field), "Departure time in hour" (a text input field), "Departure time in minute" (a text input field), and "stops during in journey" (a text input field). At the bottom of the input section is a button labeled "CLICK ME". Below the button, the text "flight price will be around" is displayed, followed by a hand cursor icon.

Flight fare prediction 😊

select your airline services
IndiGo ▼

Day of journey
[text input field]

month of journey
[text input field]

select your Source

Departure time in hour
[text input field]

Departure time in minute
[text input field]

stops during in journey
[text input field]

CLICK ME

flight price will be around 🖱️

3. User Input

Whenever the user hits our URL, they first see the user input page here they have to provide the information like:

- Every user input has its own dropdown where the user can select their input.
- After providing the required input and pressing the submit button, the page refreshes and displays the output
